TECHNICAL SKILLS

- **Languages:** Python, SQL, Java, JavaScript, TypeScript, R
- **Technologies:** Git, uv, Bun, AWS, GCP, Kubernetes, Docker, Helm, Spring, Bazel, Gradle, REST APIs, gRPC, Protobuf, Quarkus, Mutiny, Reactive Programming, GraphQL, Redis, Swagger
- **Tools:** GitHub, GitHub Actions and Workflows, Airflow, Postman, GitLab, GitLab CI/CD, Antigravity, Cursor, JetBrains, Jira, Confluence, Jenkins, Google Workspace, Microsoft Office, Splunk, Tableau, Tray.io

EXPERIENCES

- **Colgate-Palmolive** Piscataway, NJ
Platform Engineer July 2025 - Present
Python, uv, Airflow, GitHub Actions & Workflows, JavaScript, TypeScript, Bun, Nodejs, Docker, GCP, Terraform, Kubernetes
 - Engineered a **JavaScript GitHub Action** for leaving highly customizable comments in pull requests, now **open-source**.
 - Reduced **Airflow** storage needs with a **Python GitHub Workflow** that shrunk the **CloudSQL** db 35% in its first run.
 - Refactored a **GitHub Action** in **JavaScript** to enforce an internal git branching strategy and decrease runtime by 80%.
 - Enhanced a **GitHub Action** to validate **Terraform** compliance with custom **OPA policies** and centralized policy bundles.
 - Containerized the extraction of **CloudSQL** data into **Google Cloud Storage** via a **Python** container and **Airflow DAG**.
 - Hardened the **Airflow** RBAC permission system with a **Python GitHub Workflow** to automate removing former employees.
 - Creating a set of rules, skills, and workflows to better enable **agentic development** of Airflow DAGs and containers org-wide.
 - Building a custom **Airflow observability dashboard** tracking the Four Golden Signals by querying metrics via Thanos.
- **Fortinet (formerly Concourse Labs before acquisition)** Remote
Software Engineer January 2022 - July 2024
Java, Python, SQL, AWS, GCP, PostgreSQL, Postman, Gradle, Spring, Bazel, Quarkus, gRPC, Kubernetes, GitLab, Jenkins
 - Improved speed of evaluations by 10% by creating new **Java** microservices using Mutiny's **reactive programming**.
 - Designed autonomous **Postman** suites to monitor endpoints for stability, measure throughput, and perform regression testing.
 - Implemented an audit log system that recorded 100% of API actions, publishing to **Postgres** and **AWS and GCP services**.
 - Developed **GitLab** and **Jenkins CI/CD pipelines** to automate and improve the efficiency of microservice deployment.
 - Produced public authorized endpoints in **Spring Boot Java REST services**, built with **Bazel**, documented in **Swagger**.
 - Ensured scalability and 99.7% uptime by configuring **Kubernetes** self-healing and rolling updates via **Helm charts**.

CERTIFICATIONS

- **CompTIA Security+** March 2025 (Expires March 2028)
- **Google Data Analytics Professional Certificate** April 2023
- **Quantum Computing Algorithms and Programming** August 2021

EDUCATION

- **Marist College** Poughkeepsie, NY
B.S. Computer Science (Software Development) & B.S. Cybersecurity August 2018 - December 2021
 - Graduated Summa Cum Laude
 - Minor in Information Systems and Minor in Information Technology

OTHER PROJECTS

- **Cybersecurity Training Simulator** Poughkeepsie, NY
Design Team Lead, UI/UX and Gameplay Engineer August 2021 - December 2023
Unity, C#
 - Led the design team and worked on the development team to create an escape room game to teach cybersecurity principles.
 - Presented the game and a paper at an Enterprising Computing Conference where it won the cybersecurity award.
